ADDITIONAL INFORMATION

Related Product Information for PS elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Peroxisome Proliferator-activated Receptor Gamma Coactivator 1 Alpha (also known as PGC1A) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human PGC1A antibody. PGC1A present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human PGC1A Antibody is added and binds to PGC1A in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated PGC1A antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human PGC1A. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
