Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Retina-specific Copper Amine Oxidase (also known as AOC2) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human AOC2 antibody. AOC2 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human AOC2 Antibody is added and binds to AOC2 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated AOC2 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human AOC2. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
