Intended Uses: This sandwich kit is for the accurate quantitative detection of Mouse Glial Cell Line-derived Neurotrophic Factor (also known as GDNF) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Mouse GDNF antibody. GDNF present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Mouse GDNF Antibody is added and binds to GDNF in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated GDNF antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Mouse GDNF. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
