ADDITIONAL INFORMATION

Related Product Information for TPO elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of human Thymus Expressed Chemokine (also known as TECK) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human TECK antibody. TECK present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human TECK Antibody is added and binds to TECK in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated TECK antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human TECK. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
