ADDITIONAL INFORMATION

Related Product Information for iNOS elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human NOS2 antibody. NOS2 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human NOS2 Antibody is added and binds to NOS2 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated NOS2 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human NOS2. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Nitric oxide synthase, inducible (also known as NOS2) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
