ADDITIONAL INFORMATION

Related Product Information for CFB elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Complement Component 8 (also known as C8) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human C8 antibody. C8 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human C8 Antibody is added and binds to C8 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated C8 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human C8. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
