ADDITIONAL INFORMATION

Related Product Information for alphaHBDH elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Alpha-Hydroxybutyrate Dehydrogenase (also known as AHBDH) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human AHBDH antibody. AHBDH present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human AHBDH Antibody is added and binds to AHBDH in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated AHBDH antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human AHBDH. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
