ADDITIONAL INFORMATION

Related Product Information for PCDH1 elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of human Prothrombin (also known as PT) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human PT antibody. PT present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human PT Antibody is added and binds to PT in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated PT antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human PT. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
