Intended Uses: This sandwich kit is for the accurate quantitative detection of human Tumor Necrosis Factor Ligand Superfamily Member 10 (also known as Tnfsf10/Trail) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human Tnfsf10/Trail antibody. Tnfsf10/Trail present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human Tnfsf10/Trail Antibody is added and binds to Tnfsf10/Trail in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated Tnfsf10/Trail antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human Tnfsf10/Trail. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
