Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat Beclin1 (also known as BECN1) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat BECN1 antibody. BECN1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat BECN1 Antibody is added and binds to BECN1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated BECN1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat BECN1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
