Intended Uses: This sandwich kit is for the accurate quantitative detection of Rat Acetyl-Coa Carboxylase 1 (also known as ACC1) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Rat ACC1 antibody. ACC1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Rat ACC1 Antibody is added and binds to ACC1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated ACC1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Rat ACC1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
