ADDITIONAL INFORMATION

Related Product Information for TRIM21/RNF81 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Reelin (also known as RELN) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human RELN antibody. RELN present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human RELN Antibody is added and binds to RELN in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated RELN antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human RELN. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
