ADDITIONAL INFORMATION

Related Product Information for HNRNPL elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Heterogeneous Nuclear Ribonucleoprotein L (also known as HNRNPL) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human HNRNPL antibody. HNRNPL present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human HNRNPL Antibody is added and binds to HNRNPL in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated HNRNPL antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human HNRNPL. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
