ADDITIONAL INFORMATION

Related Product Information for PROM2 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Prominin 2 (also known as PROM2) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human PROM2 antibody. PROM2 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human PROM2 Antibody is added and binds to PROM2 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated PROM2 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human PROM2. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
