

## Human Tenascin-N (TNN) ELISA Kit | TNN elisa kit

Human Tenascin-N (TNN) ELISA Kit

CATALOG #  
**AAA43860**

REACTIVITY  
**Human**

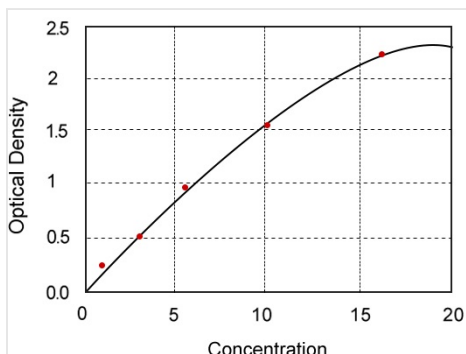

### PRODUCT SYNONYMS

Tenascin-N (TNN); Human Tenascin-N (TNN) ELISA Kit; TNN elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Reactivity              | Human                                                                    |
| Sequence Length         | 1299                                                                     |
| Samples                 | Serum, plasma, cell culture supernates, cell lysates, tissue homogenates |
| Assay Type              | Quantitative Sandwich                                                    |
| Detection Range         | 20ng/L - 6000ng/L                                                        |
| Sensitivity             | 10.17ng/L                                                                |
| Intra-Assay             | CV<8%                                                                    |
| Inter-Assay             | CV<10%                                                                   |
| Preparation and Storage | Store at 2 to 8 degree C for 6 months.                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for TNN elisa kit

**Intended Uses:** This sandwich kit is for the accurate quantitative detection of human Tenascin-N (also known as TNN) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human TNN antibody. TNN present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human TNN Antibody is added and binds to TNN in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated TNN antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human TNN. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
