ADDITIONAL INFORMATION

Related Product Information for SDBP120 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Alphaspectrin Breakdown Products SBDP120 (also known as SDBP120) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human SDBP120 antibody. SDBP120 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human SDBP120 Antibody is added and binds to SDBP120 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated SDBP120 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human SDBP120. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
