ADDITIONAL INFORMATION

Related Product Information for SAFB elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Scaffold Attachment Factor B1 (also known as SAFB) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human SAFB antibody. SAFB present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human SAFB Antibody is added and binds to SAFB in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated SAFB antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human SAFB. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
