ADDITIONAL INFORMATION

Related Product Information for SYNPO elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human SYNPO antibody. SYNPO present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human SYNPO Antibody is added and binds to SYNPO in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated SYNPO antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human SYNPO. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Synaptopodin (also known as SYNPO) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
