Related Product Information for H1 elisa kit

Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Histone H1 (also known as H1) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.

Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human H1 antibody. H1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human H1 Antibody is added and binds to H1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated H1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human H1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
