

## Human PD-L2 (B7-DC, CD273) ELISA Kit | CD273 elisa kit

Human PD-L2 (B7-DC, CD273) ELISA Kit

CATALOG #  
**AAA44288**

REACTIVITY  
**Human**

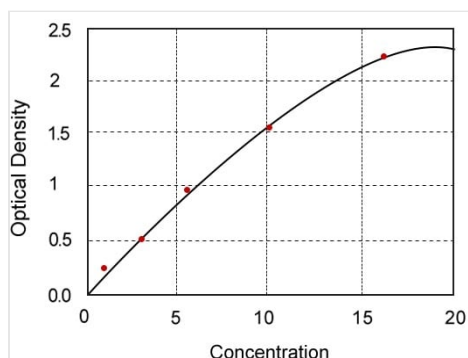

### PRODUCT SYNONYMS

PD-L2 (B7-DC; CD273); Human PD-L2 (B7-DC; CD273) ELISA Kit; CD273 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Reactivity              | Human                                                                    |
| Samples                 | Serum, plasma, cell culture supernates, cell lysates, tissue homogenates |
| Assay Type              | Quantitative Sandwich                                                    |
| Detection Range         | 30ng/L - 7000ng/L                                                        |
| Sensitivity             | 15.74ng/L                                                                |
| Intra-Assay             | CV<8%                                                                    |
| Inter-Assay             | CV<10%                                                                   |
| Preparation and Storage | Store at 2 to 8 degree C for 6 months.                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for CD273 elisa kit

**Intended Uses:** This sandwich kit is for the accurate quantitative detection of human PD-L2 (also known as B7-DC/CD273) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human B7-DC/CD273 antibody. B7-DC/CD273 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human B7-DC/CD273 Antibody is added and binds to B7-DC/CD273 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated B7-DC/CD273 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human B7-DC/CD273. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
