ADDITIONAL INFORMATION

Related Product Information for ATP1A1 elisa kit	Intended Uses: This sandwich kit is for the accurate quantitative detection of human Sodium, Potassium-transporting ATPase Subunit Alpha-1 (also known as ATP1A1) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates. Principles of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human ATP1A1 antibody. ATP1A1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human ATP1A1 Antibody is added and binds to ATP1A1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated ATP1A1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human ATP1A1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
