

## Human Villin 1 (VIL1) ELISA Kit | VIL1 elisa kit

Human Villin 1 (VIL1) ELISA Kit

CATALOG #  
**AAA44375**

REACTIVITY  
**Human**

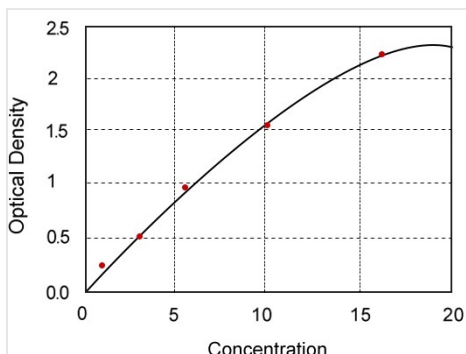

### PRODUCT SYNONYMS

Villin 1 (VIL1); Human Villin 1 (VIL1) ELISA Kit; VIL1 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                          |
|-------------------------|--------------------------------------------------------------------------|
| Reactivity              | Human                                                                    |
| Sequence Length         | 421                                                                      |
| Samples                 | Serum, plasma, cell culture supernates, cell lysates, tissue homogenates |
| Assay Type              | Quantitative Sandwich                                                    |
| Detection Range         | 10ng/L - 2000ng/L                                                        |
| Sensitivity             | 5.52ng/L                                                                 |
| Intra-Assay             | CV<8%                                                                    |
| Inter-Assay             | CV<10%                                                                   |
| Preparation and Storage | Store at 2 to 8 degree C for 6 months.                                   |

### ADDITIONAL INFORMATION

#### Related Product Information for VIL1 elisa kit

**Intended Uses:** This sandwich kit is for the accurate quantitative detection of human Villin 1 (also known as VIL1) in serum, plasma, cell culture supernates, cell lysates, tissue homogenates.

**Principles of the Assay:** This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with human VIL1 antibody. VIL1 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated human VIL1 Antibody is added and binds to VIL1 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated VIL1 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of human VIL1. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm.
