ADDITIONAL INFORMATION

Related Product Information for TEX101 elisa kit	Principle of the Assay: This kit is an Enzyme-Linked Immunosorbent Assay (ELISA). The plate has been pre-coated with Human TEX101 antibody. TEX101 present in the sample is added and binds to antibodies coated on the wells. And then biotinylated Human TEX101 Antibody is added and binds to TEX101 in the sample. Then Streptavidin-HRP is added and binds to the Biotinylated TEX101 antibody. After incubation unbound Streptavidin-HRP is washed away during a washing step. Substrate solution is then added and color develops in proportion to the amount of Human TEX101. The reaction is terminated by addition of acidic stop solution and absorbance is measured at 450 nm. Intended Uses: This sandwich kit is for the accurate quantitative detection of Human Testis-expressed protein 101 (also known as TEX101) in serum, plasma, cell culture supernates, Ascites, tissue homogenates or other biological fluids.
