IMAGES

IHC (Immunohistochemisry)
Collagen I was detected in paraffin-embedded sections of rat spleen tissues using rabbit anti- Collagen I Antigen Affinity purified polyclonal antibody at 1 ug/mL. The immunohistochemical section was developed using SABC method.

IHC (Immunohiostchemistry)
Collagen I was detected in paraffin-embedded sections of mouse lung tissues using rabbit anti- Collagen I Antigen Affinity purified polyclonal antibody at 1ug/mL. The immunohistochemical section was developed using SABC method.

WB (Western Blot)
Western blot analysis of Collagen I expression in mouse kidney extract (lane 1) and mouse cardiac muscle extract (lane 2). Collagen I at 180KD was detected using rabbit anti-Collagen I Antigen Affinity purified polyclonal antibody at 0.5ug/mL. The blot was developed using chemiluminescence (ECL) method.

ADDITIONAL INFORMATION

Related Product Information for anti-COL1A1 antibody	Collagen, type I, alpha 1, also known as COL1A1, is a human gene that encodes the major component of type I collagen, the fibrillar collagen found in most connective tissues, including cartilage. This gene is mapped to 17q21.33. And this gene encodes the pro-alpha1 chains of type I collagen whose triple helix comprises two alpha1 chains and one alpha2 chain. Type I is a fibril-forming collagen found in most connective tissues and is abundant in bone, cornea, dermis and tendon. Mutations in this gene are associated with osteogenesis imperfecta types I-IV, Ehlers-Danlos syndrome type VIIA, Ehlers-Danlos syndrome Classical type, Caffey Disease and idiopathic osteoporosis.
