Related Product Information for anti-Phenobarbital antibody

Phenobarbital is a barbiturate recommended by the World Health Organization for the treatment of certain types of epilepsy. In developed countries it is commonly used to treat seizures in young children, while other medications are generally used in older children and adults. Phenobarbital works by increasing the activity of the inhibitory neurotransmitter GABA.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
