ADDITIONAL INFORMATION

Related Product Information for anti-C4.4A antibody	C4.4A is a structural homolog of the urokinase-type plasminogen activator receptor (uPAR). It was originally identified as a metastasis-associated membrane protein in malignant urothelium. In literature IHC studies, staining has been observed in suprabasal keratinocytes of chronic wounds and the amniotic membrane of placenta. ISH analysis demonstrated expression in urothelium of the ureter.
