ADDITIONAL INFORMATION

Related Product Information for anti-HTR4 antibody	The 5-HT4 receptor, a member of the Serotonin Receptor subfamily, has been shown to affect the sensory and motor functions of the gut. Some of the most promising emerging therapies in Irritable Bowel Syndrome revolve around targeted pharmacotherapeutic modulation of serotonin receptors (ie, 5-HT3 and 5-HT4 subtypes). At least 9 isoforms (5-HT4A-5-HT4G, and 5-HT4n) have been described, which differ in the length and composition of their intracellular C termini after a common splicing site (L358).
Product Categories/Family for anti-HTR4 antibody	Family: GPCR; Subfamily: Serotonin
