ADDITIONAL INFORMATION

Related Product Information for anti-PLK1 antibody	PLK, a Polo type protein kinase, has been shown to function in mitosis. The mRNA is absent or expressed at very low levels during the G1 phase, begins to reaccumulate during the S phase, and reaches maximal levels during the G2/M phase. PLK1 may participate in targeting MPF to the nucleus during prophase and in regulating mitotic spindle function. These functions, in addition to its expression in proliferating cells, suggest that PLK1 has a role in cancer progression.
