

## Rat Free fatty acids ELISA Kit | FFA elisa kit

Rat Free fatty acids (FFA) ELISA Kit

CATALOG #  
**AAA55411**

REACTIVITY  
**Rat**

### PRODUCT SYNONYMS

Free fatty acids; Rat Free fatty acids (FFA) ELISA Kit; FFA elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                      |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Rat                                                                                                                                                                                                  |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of Rat FSH. No significant cross-reactivity or interference between Rat FSH and analogues was observed.                      |
| Samples                 | Serum, Plasma And Other Biological Fluids                                                                                                                                                            |
| Assay Type              | Quantitative Competitive                                                                                                                                                                             |
| Detection Range         | 4 mIU/mL-120 mIU/mL                                                                                                                                                                                  |
| Sensitivity             | 4 mIU/mL (mean of 6 independent assays).                                                                                                                                                             |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay) Three samples of known concentration were tested twenty times on one plate to assess intra-assay precision. Intra-Assay: CV<8%                     |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays) Three samples of known concentration were tested in forty separate assays to assess inter-assay precision. CV(%) = SD/meanX100. Inter-Assay: CV<12% |
| Preparation and Storage | Store at 2-8 degree C.                                                                                                                                                                               |

| Related Product Information for FFA elisa kit | <p>Intended Uses: For the quantitative detection of Rat Follicle-stimulating hormone (FSH) concentration in serum, plasma and other biological fluids.</p> <p>Principle of the Assay: This assay employs the competitive enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with goat-anti-rabbit antibody. Standards or samples are added to the appropriate microtiter plate wells with an antibody specific for FSH and Horseradish Peroxidase (HRP) conjugated FSH. The competitive inhibition reaction is launched between with HRP labeled FSH and unlabeled FSH with the antibody. A substrate solution is added to the wells and the color develops in opposite to the amount of FSH in the sample. The color development is stopped and the intensity of the color is measured.</p> |
