ADDITIONAL INFORMATION

Related Product Information for Kat8 elisa kit	Principle of the Assay: The ELISA is based on the competitive binding enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Histone acetyltransferase KAT8, During the reaction, Histone acetyltransferase KAT8 in the sample or standard competes with a fixed amount of biotin-labeled Histone acetyltransferase KAT8 for sites on a pre-coated Monoclonal antibody specific to Histone acetyltransferase KAT8. Excess conjugate and unbound sample or standard are washed from the plate. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The concentration of Histone acetyltransferase KAT8 in the samples is then determined by comparing the O.D. of the samples to the standard curve.
