

## Mouse anti-Human Alpha-Fetoprotein (AFP) Monoclonal Antibody | anti-AFP antibody

Alpha-Fetoprotein (AFP)

|                              |                      |                            |
|------------------------------|----------------------|----------------------------|
| CATALOG #<br><b>AAA58782</b> | HOST<br><b>Mouse</b> | REACTIVITY<br><b>Human</b> |
|------------------------------|----------------------|----------------------------|

### PRODUCT SYNONYMS

Alpha-Fetoprotein (AFP); Monoclonal Antibody; anti-AFP antibody

### PRODUCT SPECIFICATIONS

|                  |                          |
|------------------|--------------------------|
| Host             | Mouse                    |
| Reactivity       | Human                    |
| Clonality        | Monoclonal               |
| Isotype          | IgG                      |
| Positive Control | Hepatocellular Carcinoma |
| Localization     | Cytoplasmic              |

### ADDITIONAL INFORMATION

|                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Related Product Information for anti-AFP antibody | Alpha-Fetoprotein (AFP) is a major plasma glycoprotein seen in hepatocytes of fetal liver and in hepatoma. Elevated levels of AFP in adult serum may be indicative of hepatocellular carcinoma, hepatoid adenocarcinoma, germ cell tumours, or yolk sac tumours. In hepatocellular carcinoma, AFP expression usually indicates malignancy in a hepatocellular nodule and hepatic histogenesis of a malignancy. |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
