### PRODUCT SYNONYMS

Actin; Smooth Muscle; Monoclonal Antibody; anti-Actin; Smooth Muscle antibody

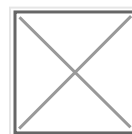

### PRODUCT SPECIFICATIONS

|                         |                                                                                                        |
|-------------------------|--------------------------------------------------------------------------------------------------------|
| Host                    | Mouse                                                                                                  |
| Reactivity              | Human, Dog, Cat, Rat, Sheep, Pig                                                                       |
| Clonality               | Monoclonal                                                                                             |
| Isotype                 | IgG2a/K                                                                                                |
| Clone Number            | ASM/H12                                                                                                |
| Form/Format             | S. M. Actin is a mouse monoclonal antibody derived from cell culture supernatant that is concentrated, |
| Control                 | Appendix, Uterus                                                                                       |
| Localization            | Cytoplasmic                                                                                            |
| Reactivity Note         | Paraffin, Frozen                                                                                       |
| Preparation and Storage | Store at 2 to 8 degree C in the dark.                                                                  |

### ADDITIONAL INFORMATION

#### Related Product Information for anti-Actin, Smooth Muscle antibody

Actin is a major component of the cytoskeleton and is present in every cell type. Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed in all eukaryotic cells. In vertebrates 3 main groups of actin isoforms (alpha, beta and gamma) have been identified. The alpha actins

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
