

MAOB recombinant protein

Recombinant MAOB protein

CATALOG #
AAA59724

HOST
Baculovirus

PRODUCT SYNONYMS

MAOB; Recombinant MAOB protein; Monoamine Oxidase B; MAOB recombinant protein

PRODUCT SPECIFICATIONS

Host	Baculovirus
Purity/Purification	The recombinant protein is >85% pure by SDS-PAGE.
Form/Format	Full length recombinant MAOB protein was expressed in Sf9 cells and is supplied in 25mM Hepes pH7.5, 300mM NaCl, 5% Glycerol, 0.04% Triton X-100, 0.2mM TCEP, 0.2mg/ml 3× DYKDDDDK peptide.
Protein Species	Human
Tag	DYKDDDDK-Tag
Notes	Recombinant MAOB protein is suitable for use in the study of enzyme kinetics, inhibitor screening, and selectivity profiling. Monoamine Oxidase Assay: 40uM substrate was incubated with MAOA protein in reaction buffer for 1 hour at room temperature, then the product was incubated with Detection Reagent for 0.5 hour at temperature. The activity of MAOA was detected by Promega MAO-Glo Assay.
Dry Ice Note	The product may be shipped with dry ice, and an additional fee may be added to your shipping cost.
Preparation and Storage	Recombinant proteins in solution are temperature sensitive and must be stored at -80 degree C to prevent degradation. Avoid repeated freeze/thaw cycles and keep on ice when not in storage. Shipping Temp: Dry Ice

IMAGES

Application Data

MAO-Glo™ Assay for MAOA activity 40 uM substrate was incubated with MAOA protein in reaction buffer for 1 hour at room temperature, then the product was incubated with Detection Reagent for 0.5 hour at temperature. The activity of MAOA was detected by Promega MAO-Glo Assay.

SDS-PAGE

Recombinant MAOB protein gel. MAOB protein was run on an 8% SDS-PAGE gel and stained with Coomassie blue.

ADDITIONAL INFORMATION

Related Product Information for MAOB recombinant protein

Short Description: Recombinant MAOB (accession number NP_000889.3) was expressed in Sf9 cells and contains an N-terminal DYKDDDDK-Tag with an observed molecular weight of 59.8 kDa. The recombinant protein is >85% pure by SDS-PAGE. It is suitable for use in the study of enzyme kinetics, inhibitor screening, and selectivity profiling.

Background: MAOB (Monoamine Oxidase B) is one of two neighboring mitochondrial enzyme family members which catalyze the oxidative deamination of amines, such as dopamine, norepinephrine, and serotonin. The other member is MAOA. MAOB preferentially degrades benzylamine and phenylethylamine. MAOB catalyzes the oxidative deamination of biogenic and xenobiotic amines and plays an important role in the metabolism of neuroactive and vasoactive amines in the central nervous system and peripheral tissues.

NCBI AND UNIPROT INFORMATION

NCBI GI #	38202207
NCBI GeneID	4129
NCBI Accession #	NP_000889.3
NCBI GenBank Nucleotide #	NM_000898.4
UniProt Accession #	P27338; Q7Z6S2; B2R6R3; B7Z5H3; D3DWC3
Molecular Weight	46,539 Da
NCBI Official Full Name	amine oxidase
NCBI Official Synonym Full Names	monoamine oxidase B
NCBI Official Symbol	MAOB
NCBI Protein Information	amine oxidase [flavin-containing] B; amine oxidase [flavin-containing] B; MAO, brain; MAO, platelet; MAO-B; adrenalin oxidase; monoamine oxidase type B; tyramine oxidase
UniProt Protein Name	Amine oxidase [flavin-containing] B
UniProt Gene Name	MAOB
UniProt Synonym Gene Names	MAO-B
UniProt Entry Name	AOFB_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
