

HSV-2 Glycoprotein C (gC) Recombinant Protein | HSV-2 recombinant protein

HSV-2 Glycoprotein C (gC)

CATALOG # AAA62087	HOST HEK293 cells	APPLICATIONS ELISA, Western Blot
------------------------------	-----------------------------	--

PRODUCT SYNONYMS

HSV-2 Glycoprotein C (gC); HSV-2 recombinant protein

PRODUCT SPECIFICATIONS

Host	HEK293 cells
Purity/Purification	>95% pure by 10% SDS-PAGE gel
Concentration	50 ug (1 ug/ul) in PBS (varies by lot)
Applicable Applications for HSV-2 recombinant protein	Immunogen, ELISA, WB (Western Blot)
Source	Expressed and purified from HEK293 cells
Preparation and Storage	Store at -20°C Stable for two weeks from the date of receipt when kept at 4°C. Non-hazardous. No MSDS required.

IMAGES

SDS-PAGE

SDS-PAGE: purified glycoprotein C (HSV-2) protein

ADDITIONAL INFORMATION

Related Product Information for HSV-2 recombinant protein

Recombinant HSV-2 glycoprotein C expressed and purified from 293 cells. C-terminal 6xhis-tagged recombinant gC (HSV-2) (amino acid 28-445) (GenBank accession#: AFM93864)

Introduction: Glycoprotein D (gD) is a structural component of the herpes simplex virus (HSV) envelope which is essential for virus entry into host cells. Herpes viruses have an envelope and an outer lipid bilayer which contains twelve surface glycoproteins. For infectivity to be attained, the double stranded DNA genome of HSV must enter the host cell through means of fusion of its envelope with the cellular membrane or via endocytosis. Other viral glycoproteins involved in the process of viral cell entry include gC, gB, gD, gH, and gL, but only gC, gB, gD, and gH are required for the fusion of the HSV's envelope with the cellular membrane.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
