ADDITIONAL INFORMATION

Related Product Information for COVID-19 pseudovirus	It has been known that SARS coronavirus 2 (SARS-CoV-2) uses human ACE2 as entry receptor and human proteases as entry activators. The virus surface spike protein (S) mediates SARS-CoV-2 entry into cells. To fulfill its function, SARS CoV-2 spike binds to its human ACE2 (hACE2) receptor through its receptor-binding domain (RBD) and is proteolytically activated by human proteases Our SARS-CoV-2-Deltacron Pseudoviral Particles are replication-deficient MLV pseudotyped with the SARS-CoV-2 spike protein (Accession ID: EPI_ISL_10819657) of the Deltacron variant. They also They establish a pseudovirus cell entry assay mediated by the SARS CoV-2 spike protein that can be conveniently measured via luciferase reporter activity. This pseudovirus assay isolates the SARS-CoV-2 viral entry from other steps of the viral infection cycle.
