

## Human Duffy Blood Group Chemokine Receptor (DARC) ELISA Kit | DARC elisa kit

Human Duffy Blood Group Chemokine Receptor (DARC) ELISA Kit

CATALOG #  
**AAA63303**

REACTIVITY  
**Human**

### PRODUCT SYNONYMS

Duffy Blood Group Chemokine Receptor (DARC); Human Duffy Blood Group Chemokine Receptor (DARC) ELISA Kit; CD234; CCBP1; Dfy; FY; GPD; Duffy Antigen; Ackr1; DARC elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of DARC. No significant cross-reactivity or interference between DARC and analogues was observed.                                  |
| Sequence Length         | 338                                                                                                                                                                                                        |
| Samples                 | Serum, plasma, cell lysates or other biological fluids                                                                                                                                                     |
| Assay Type              | Quantitative Sandwich                                                                                                                                                                                      |
| Detection Range         | 0.156-10ng/mL                                                                                                                                                                                              |
| Sensitivity             | < 0.062ng/mL                                                                                                                                                                                               |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level DARC were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                     |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level DARC were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%   |
| Preparation and Storage | For unopened kit, all reagents should be kept according to the labels on vials. The TMB Substrate, Wash Buffer, Stop Solution should be stored at 4 degree C. All others should be stored at -20 degree C. |

### ADDITIONAL INFORMATION

#### Related Product Information for DARC elisa kit

**Intended Uses:** The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of DARC in human serum, plasma, cell lysates or other biological fluids.

**Principle of the Assay:** The microtiter plate provided in this kit has been pre-coated with an antibody specific to DARC. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to DARC. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain DARC, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of DARC in the samples is then determined by comparing the O.D. of the samples to the standard curve.
