ADDITIONAL INFORMATION

Related Product Information for THBS4 elisa kit	Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of THBS4 in human serum, plasma and other biological fluids Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to THBS4. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to THBS4. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain THBS4, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of THBS4 in the samples is then determined by comparing the O.D. of the samples to the standard curve.
