

Mouse Cerberus (CER) ELISA Kit | CER elisa kit

Mouse Cerberus (CER) ELISA Kit

CATALOG #
AAA64346

REACTIVITY
Mouse

PRODUCT SYNONYMS

Cerberus (CER); Mouse Cerberus (CER) ELISA Kit; CER1; DAND4; Cerberus 1; DAN domain family member 4; Cysteine Knot Superfamily; Homolog(Xenopus Laevis); Cerberus-related protein; CER elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of CER. No significant cross-reactivity or interference between CER and analogues was observed.
Sequence Length	272
Samples	Serum, plasma and other biological fluids.
Assay Type	Sandwich
Detection Range	31.25-2000pg/mL
Sensitivity	11.7pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level CER were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level CER were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	For unopened kit, all reagents should be kept according to the labels on vials. The TMB Substrate, Wash Buffer, Stop Solution should be stored at 4 degree C. All others should be stored at -20 degree C.

ADDITIONAL INFORMATION

Related Product Information for CER elisa kit	Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of CER in mouse serum, plasma and other biological fluids. Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to CER. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to CER. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain CER, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of CER in the samples is then determined by comparing the O.D. of the samples to the standard curve.
