

## Mouse Procollagen C Proteinase Enhancer 1 (PCPE1) ELISA Kit | PCPE1 elisa kit

Mouse Procollagen C Proteinase Enhancer 1 (PCPE1) ELISA Kit

|                              |                            |
|------------------------------|----------------------------|
| CATALOG #<br><b>AAA65270</b> | REACTIVITY<br><b>Mouse</b> |
|------------------------------|----------------------------|

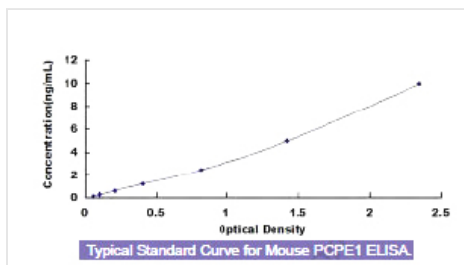

### PRODUCT SYNONYMS

Procollagen C Proteinase Enhancer 1 (PCPE1); Mouse Procollagen C Proteinase Enhancer 1 (PCPE1) ELISA Kit; PCOLCE; PCPE; Procollagen Type 1 COOH-Terminal Proteinase Enhancer; Procollagen C Endopeptidase Enhancer; Type I procollagen COOH-terminal proteinase enhancer; PCPE1 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of PCPE1. No significant cross-reactivity or interference between PCPE1 and analogues was observed.                                |
| Sequence Length         | 468                                                                                                                                                                                                        |
| Samples                 | Serum, plasma and other biological fluids.                                                                                                                                                                 |
| Assay Type              | Sandwich                                                                                                                                                                                                   |
| Detection Range         | 0.468-30ng/mL                                                                                                                                                                                              |
| Sensitivity             | 0.18ng/mL                                                                                                                                                                                                  |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level PCPE1 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                    |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level PCPE1 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%  |
| Preparation and Storage | For unopened kit, all reagents should be kept according to the labels on vials. The TMB Substrate, Wash Buffer, Stop Solution should be stored at 4 degree C. All others should be stored at -20 degree C. |

| Related Product Information for PCPE1 elisa kit | <p>Intended Uses: The kit is a sandwich enzyme immunoassay for in vitro quantitative measurement of PCPE1 in mouse serum, plasma and other biological fluids.</p> <p>Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to PCPE1. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to PCPE1. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain PCPE1, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of PCPE1 in the samples is then determined by comparing the O.D. of the samples to the standard curve.</p> |
