

Rat Angiotensin I (AngI) ELISA Kit | AngI elisa kit

Rat Angiotensin I (AngI) ELISA Kit

CATALOG #
AAA66219

REACTIVITY
Rat

PRODUCT SYNONYMS

Angiotensin I (AngI); Rat Angiotensin I (AngI) ELISA Kit; Ang-I; Angiotensin-1; AngI elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of ANGI. No significant cross-reactivity or interference between ANGI and analogues was observed.
Samples	Serum, plasma and other biological fluids.
Assay Type	Competitive inhibition
Detection Range	15.625-1000pg/mL
Sensitivity	4.62pg/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level ANGI were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level ANGI were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	For unopened kit, all reagents should be kept according to the labels on vials. The TMB Substrate, Wash Buffer, Stop Solution should be stored at 4 degree C. All others should be stored at -20 degree C.

ADDITIONAL INFORMATION

Related Product Information for AngI elisa kit

Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of ANGI in rat serum, plasma, and other biological fluids.

Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to ANGI has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled ANGI and unlabeled ANGI (Standards or samples) with the pre-coated antibody specific to ANGI. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of ANGI in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of ANGI in the sample.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
