ADDITIONAL INFORMATION

Related Product Information for Ang1-7 elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of Ang1-7 in human serum, plasma, tissue homogenates, cell lysates, cell culture supernates or other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to Ang1-7 has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled Ang1-7 and unlabeled Ang1-7 (Standards or samples) with the pre-coated antibody specific to Ang1-7. After incubation the unbound conjugate is washed off. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of Ang1-7 in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of Ang1-7 in the sample.
