

## Mouse Vascular Endothelial Growth Factor B (VEGFB) ELISA Kit | VEGFB elisa kit

Mouse Vascular Endothelial Growth Factor B (VEGFB) ELISA Kit

CATALOG #  
**AAA66654**

REACTIVITY  
**Mouse**

### PRODUCT SYNONYMS

Vascular Endothelial Growth Factor B (VEGFB); Mouse Vascular Endothelial Growth Factor B (VEGFB) ELISA Kit; VEGF-B; VEGFL; VRF; VEGF-Related Factor; VEGFB elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of VCP. No significant cross-reactivity or interference between VCP and analogues was observed.                                    |
| Sequence Length         | 188                                                                                                                                                                                                        |
| Samples                 | Human Serum, Plasma, Tissue Homogenates Or Other Biological Fluids                                                                                                                                         |
| Assay Type              | Quantitative Sandwich                                                                                                                                                                                      |
| Detection Range         | 0.312-20ng/mL                                                                                                                                                                                              |
| Sensitivity             | 0.122ng/mL.                                                                                                                                                                                                |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level VCP were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                      |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level VCP were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%    |
| Preparation and Storage | For unopened kit, all reagents should be kept according to the labels on vials. The TMB Substrate, Wash Buffer, Stop Solution should be stored at 4 degree C. All others should be stored at -20 degree C. |

| Related Product Information for VEGFB elisa kit | <p>Intended Uses: The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of VCP in human serum, plasma, tissue homogenates or other biological fluids.</p> <p>Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to VCP. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to VCP. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain VCP, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of VCP in the samples is then determined by comparing the O.D. of the samples to the standard curve.</p> |
