ADDITIONAL INFORMATION

Related Product Information for NKB elisa kit

Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of NKB in human serum, plasma and other biological fluids.

Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to NKB has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled NKB and unlabeled NKB (Standards or samples) with the pre-coated antibody specific to NKB. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of NKB in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of NKB in the sample.
