

Dog Luteinizing Hormone (LH) ELISA Kit | LH elisa kit

Canine Luteinizing Hormone (LH) ELISA Kit

CATALOG #
AAA68425

REACTIVITY
Dog

PRODUCT SYNONYMS

Luteinizing Hormone (LH); Canine Luteinizing Hormone (LH) ELISA Kit; ICSH; Lutropin; Interstitial Cell Stimulating Hormone; LH elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Dog
Specificity	This assay has high sensitivity and excellent specificity for detection of LH. No significant cross-reactivity or interference between LH and analogues was observed.
Samples	Serum, plasma and other biological fluids
Assay Type	Quantitative Competitive
Detection Range	0.468-30ng/mL
Sensitivity	<0.189ng/mL.
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level LH were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level LH were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%

ADDITIONAL INFORMATION

Related Product Information for LH elisa kit	Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of LH in canine serum, plasma and other biological fluids. Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to LH has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled LH and unlabeled LH (Standards or samples) with the pre-coated antibody specific to LH. After incubation the unbound conjugate is washed off. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of LH in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of LH in the sample.
