

# Human V-Erb B2 Erythroblastic Leukemia Viral Oncogene Homolog 3 (ErbB3) RTU ELISA Kit | ErbB3 rtu elisa kit

Human V-Erb B2 Erythroblastic Leukemia Viral Oncogene Homolog 3 (ErbB3) ELISA Kit

|                              |                            |
|------------------------------|----------------------------|
| CATALOG #<br><b>AAA70450</b> | REACTIVITY<br><b>Human</b> |
|------------------------------|----------------------------|

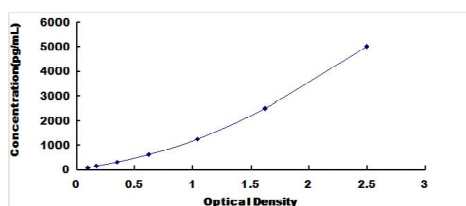

## PRODUCT SYNONYMS

V-Erb B2 Erythroblastic Leukemia Viral Oncogene Homolog 3 (ErbB3); Human V-Erb B2 Erythroblastic Leukemia Viral Oncogene Homolog 3 (ErbB3) ELISA Kit; HER3; MDA-BF-1; C-ErbB3; LCCS2; ErbB3-S; P180-ErbB3; P45-SErbB3; P85-SErbB3; Receptor Tyrosine-Protein Kinase ErbB-3; Lethal Congenital Contracture Syndrome 2; ErbB3 rtu elisa kit

## PRODUCT SPECIFICATIONS

|                           |                                                                                                                                                                                                                                                                                                                                                     |

| Reactivity                | Human                                                                                                                                                                                                                                                                                                                                               |
| Sequence Length           | 183                                                                                                                                                                                                                                                                                                                                                 |
| Assay Type                | Sandwich                                                                                                                                                                                                                                                                                                                                            |
| Samples                   | Serum, Plasma, Tissue Homogenates or Other Biological Fluids.                                                                                                                                                                                                                                                                                       |
| Detection Range           | 78.1-5000pg/mL                                                                                                                                                                                                                                                                                                                                      |
| Sensitivity               | 32pg/mL                                                                                                                                                                                                                                                                                                                                             |
| RTU ELISA Kit's Advantage | The Ready-To-Use (RTU) Kits require fewer steps in setup and take less time to run. Detection Solutions are pre-diluted and total incubation time is shorter than many other ELISA Kits.                                                                                                                                                            |
| Preparation and Storage   | For unopened kits: All the reagents should be kept at 4 degree C upon receipt.<br>For opened kits: Once the kit is opened, the remaining reagents still need to be stored according to the above storage conditions. In addition, return the unused wells to the foil pouch containing the desiccant pack and reseal along entire edge of zip-seal. |

| Related Product Information for ErbB3 rtu elisa kit | <p>Test Principle: The microtiter plate provided in this kit has been pre-coated with an antibody specific to ErbB3. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to ErbB3. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain ErbB3, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm <math>\pm</math> 10nm. The concentration of ErbB3 in the samples is then determined by comparing the O.D. of the samples to the standard curve.</p> |
