

IgY secondary antibody

Goat Anti Chicken IgY (H+L) (Unconjugated)

CATALOG #	HOST	REACTIVITY	APPLICATIONS
AAA71352	Goat	Chicken	immunoassay, Radioimmunoassay, ELISA

PRODUCT SYNONYMS

IgY; Goat Anti Chicken IgY (H+L) (Unconjugated); Goat anti-chicken IgY (H+L); IgY secondary antibody

PRODUCT SPECIFICATIONS

Host	Goat
Reactivity	Chicken
Specificity	The antibody was raised in goat by immunizing purified chicken IgY. These antisera were then immunoaffinity purified from the antigen specific column with minimum cross-reaction to human serum proteins. Based on immunoelectrophoresis, the antibody reacts with the heavy chains on Mouse IgG and with the light chains common to most mouse immunoglobulines. No antibody was detected against non-immunoglobulin serum proteins. This antibody was depleted by bovine, goat, guinea pig, Syrian hamster, horse, human, mouse, rabbit, rat and sheep serum protein.
Form/Format	Sterile Liquid
Applicable Applications for IgY secondary antibody	IA (Immunoassay), RIA (Radioimmunoassay), ELISA
Preparation and Storage	Keep the product at 2-8 degree C with sterile condition. For long term storage, add an equal amount of glycerol, mix and stored at -20 degree C. Alternatively, the product may be aliquoted and stored at -70 degree C or below without adding glycerol. Avoid freezing and thawing frequently.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
