ICC (Immunocytochemistry)

Immunocytochemical labeling of delta1-Catenin in untreated (Top) or pervanadate-treated (bottom) A431 cells. The cells were labeled with mouse monoclonal delta1-Catenin (a.a. 275-285), delta1-Catenin (Tyr-228), delta1-Catenin (Tyr-280), or delta1-Catenin (Tyr-302) antibodies. The antibodies were detected using donkey anti-mouse secondary antibodies conjugated to Cy3.

WB (Western Blot)

Western blot analysis of delta1-Catenin phosphorylation in A431 cells stimulated with calyculin A (100nM) for 30 min. (lanes 1 & 3) then the blot was treated with lambda phosphatase (lanes 2 & 4). The blots were probed with either mouse monoclonal anti-delta1-Catenin (a.a. 275-285) (lanes 1 & 2) or rabbit polyclonal anti-delta1-Catenin (Thr-916) (lanes 3 & 4).

ADDITIONAL INFORMATION

Related Product Information for anti-CTNND1 antibody	Catenins have emerged as molecular sensors that integrate cell-cell junctions and cytoskeletal dynamics with signaling pathways that control morphogenesis and cell to cell communication. delta1-Catenin (p120 catenin) is a catenin family member which contains an N-terminal coiled-coil domain, a regulatory domain containing multiple phosphorylation sites, and a central Armadillo repeat domain. delta1-Catenin regulates E-cadherin turnover, and has both positive and negative effects on cadherin-mediated adhesion. Actin dynamics are also regulated by delta1-Catenin, which can modulate RhoA, Rac and cdc42 activity. delta1-Catenin is phosphorylated at multiple tyrosine, serine and threonine sites both in vitro and in vivo. High levels of delta1-Catenin phosphorylated at Tyr-228 are commonly seen in several carcinoma cell lines and after EGFR activation. Many other tyrosine sites are also phosphorylated in the N-terminal region including Tyr-96, Tyr-112, Tyr-280, and Tyr-302. In addition, Thr-310 and Thr-916 are constitutively phosphorylated in many cell types, however this phosphorylation may occur only in delta1-Catenin associated with the plasma membrane.
