IF (Immunofluorescence)
Immunofluorescence staining of fixed Molt4 cells with anti-CD2 antibody YTH 655 (AAA72014) at 10 ug/ml for 1h followed by Alexa Fluor 488 secondary antibody (1 ug/ml), showing membrane, and some cytoplasmic staining. The nuclear stain is DAPI (blue). Panels show from left-right, top-bottom AAA72014, DAPI, merged channels and an isotype control. The isotype control was stained with an anti-Fluorescein antibody followed by Alexa Fluor 488 secondary antibody.

WB (Western Blot)
Western Blot using anti-CD2 antibody YTH 655 Human tonsil lysate samples (35ug protein in RIPA buffer) were resolved on a 10% SDS PAGE gel and blots probed with the chimeric rabbit version of YTH 655 (AAA72014) at 1 ug/ml before detection using an anti-rabbit secondary antibody. A primary incubation of 1h was used and protein was detected by chemiluminescence. The expected running size for unmodified CD2 is 39.5kDa, but this protein is glycosylated at several residues. AAA72014 successfully detected CD2 in human tonsil lysate.
