

Aflatoxin B1 ELISA Kit

Aflatoxin B1 ELISA

CATALOG #
AAA72722

PRODUCT SYNONYMS

Aflatoxin B1; Aflatoxin B1 ELISA; Aflatoxin B1 elisa kit

PRODUCT SPECIFICATIONS

Samples	Cereals and beer/gyle
Preparation and Storage	Store at 2-8 degree C

Principle of the Assay: The Demeditec Aflatoxin B1 quantitative test is based on the principle of the enzyme-linked immu-nosorbent assay. An antibody binding protein is coated on the surface of a microtiter plate. Aflatoxin B1 containing samples or standards, an aflatoxin-peroxidase conjugate and an antibody directed against aflatoxins are given into the wells of the microtiter plate. The conjugate competes with the aflatoxin B1 of samples/standards for the limited number of antibody sites. Simultaneously the anti-aflatoxin antibody is bound to the antibody-binding protein coated on the microtiter plate. After 10 minutes incubation at room temperature the wells are washed with diluted washing solution to remove unbound material. A substrate solution is added and incubated for 10 minutes, resulting in the development of a blue colour. The colour development is inhibited by the addition of a stop solution, and the colour turns yellow. The yellow colour is measured photometrically at 450 nm. The concentration of aflatoxin B1 is indirectly proportional to the colour intensity of the test sample.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
