ADDITIONAL INFORMATION

Related Product Information for anti-CD34 antibody	anti mouse CD34 reacts with Mouse CD34, a protein present on endothelial cells and hematopoietic progenitor cells. The antibody recognizes a neuraminidase sensitive epitope on endothelium in vivo, particularly on small vessels and neoformed capillaries and developing vascular structures in embryonal structures. The antibody reacts with hematopoietic progenitors particularly of myelomonocytic colony forming cells. It is a useful reagent for identification and characterization of capillary endothelial cells. Furthermore the antibody can be used for isolation and characterization of hematopoietic progenitor cells. This clone is suitable for use in ELISA, immunofluorescence, immunohistochemistry on frozen and paraffin sections, Western Blot, immunoprecipitation, flow cytometry and cell separation.
